Extension Service: Hemoglobin Level Determination in Rural Women

Activity by – Woman Empowerment Cell & N.S.S.

SUMMARY REPORT

Academic Years: 2017-18 to 2019-20.

Objectives of the Practice:

1. To create awareness in rural women about anemia for their health betterment.
2. To help rural women to eradicate anemia (which is a common condition in females now a days) by suggesting iron rich food.

THE CONTEXT:

It is commonly seen that household women / women workers in the villages are not much aware about balance diet and consumes less nutritious food due to the poverty and less cautious about the nutrition. So, one of the major setbacks is that the haemoglobin content in most these females found lesser than the limit and which can often lead to anemic condition. After puberty, girls are at more risk of iron deficiency anemia. So, to prevent anemic condition it is necessity to know the hemoglobin content in women so the natural remedies can be suggested. Our Institution planned to take up this task by at village Chandapur and provide guideline to increase Hb content by consuming iron rich food.

ACADEMIC YEAR: 2017-18

NSS unit of the college organised HC Checkup camp on 11th January 2018 at Chandapur Village adopted by NSS unit of the college. The Hemoglobin check camp was organized parallelly with the assistance on NSS Volunteers. For the same Dr. Yogesh Lakass, MBBS, MD, Intensivist, Aurangabad was a expert doctor with his team of Sai Sanket Multispecialty Hospital, Aurangabad, Principal of the college and

Sarpanch of the village were present for the event. The Haemoglobin level of 86 women was checked. Few of them were identified with low Hb content and were advised by doctor and also distributed information pomplets regarding the iron reach food.

ACADEMIC YEAR: 2018-19

13th January 2019 haemoglobin level determination camp was organized during the seven days special camp of NSS. Doctor's with his team of Dattaji Bhale blood bank Hedgewar hospital Aurangabad was present for the event. the Hemoglobin level of 96 women was checked. Few of them were identified with increase Hb content and addressed by the doctor.

ACADEMIC YEAR: 2019-20

13th January 2020 On 13th January 2020 Haemoglobin level determination camp was organised with the help of NSS volunteers during the special day camp. The villagers responded enthusiastically haemoglobin level check-up. The Hemoglobin level of 91 women was checked. Few of them were identified with maximum Hb content and addressed by doctors accordingly. Besides these villagers and many of teaching, non-teaching staff, student from college took part voluntarily for blood donation.

EVIDENCE OF SUCCESS

The Hemoglobin level of women was checked consecutively for 3 years. Few of them were identified with low Hb content. They are informed about when the level of hemoglobin in blood and may be experiencing one or more of the following symptoms- fatigue, weakness, shortness of breath, dizziness, headaches, pale skin, brittle nails, rapid heartbeat and poor appetite. If it drops beyond an acceptable level, the condition is called Anemia, also known as iron deficiency. Doctors and experts team and staff female employees addressed the issue with women along with their family members and suggested iron deficiency can be fought by following a strict diet including foods that are rich in iron, folic acid, and vitamins C and B12. Doctors suggested women to eat healthy diet which is very cheap and easily available to them like spinach, beans, pulses, seasonable fruits available to them in farm. During the 3 years it is found that 25

rural women who were found deficient hemoglobin earlier improved the Hb level. Hence the camps organized were fruitful at our end.

SUMMARY/CONCLUSIONS:

Food Play very important role in human being. Day by day the quality of food is decreases, so that the impact of it is reflected on health and its issues. The demand of food increases due to increase in populations. So that responsibility of society on the solder, of man & woman both. But unfortunately, the women are living in rural area not much aware about balance diet. Our Institution has decided to increase the hemoglobin level and we tried for three years to increase the hemoglobin level by taking camp and observations.

The graph shows that the hemoglobin level changed by taking proper food and medic in under the guidance of reported doctor and it's team.

In the Year 2017-18 maximum hemoglobin level is 10.2 which increase up to 11.2 in the case of Mrs. Chadrakalabai Khakre also in case of Mrs. Madhuri Thorat the hemoglobin level is increases 9.5 to 12.5.
